

Method and apparatus for service level management, wherein business processes are composed of services. A state of the service is defined by one or more service parameters, 5 and the service parameters depend upon performance of network components that support the service, e.g., component parameters. The state of the service may depend, for example, on a collection of service parameter values for availability, reliability, security, integrity and response time. A service level agreement is a contract between a supplier and a customer that identifies services supported by a network, service parameters for the services, and service 10 levels (e.g., acceptable levels) for each service parameter.
